

Executive Summary

This executive summary presents, in brief, a **Global Knowledge Platform** (GKP). It is artificial intelligence (AI)-based project currently under development by **Global Knowledge Development Ltd.** GKD Ltd is a hi-tech IT R&D startup company incorporated in the United Kingdom, London metropolitan area.

The Product

GKP is a global online marketplace for selling and buying knowledge on demand. The platform is a unified **one-stop shop for knowledge transfer** (KT). GKP will directly interlink both global categories of its customers - knowledge contributors and knowledge consumers (the supply side and the demand side). GKP is for all people around the world who want to prepare better for their professional career and jobs. The platform will offer them a better (**more efficient**) way of digital knowledge transfer.

GKP will vastly influence the way humanity collect, transfer, share, manage and use knowledge. Using GKP services, people will also learn how to collaborate with AI while assisted, tutored or advised by it, which is a very important skill in fast approaching AI age.

The GKP project is of exceptional importance to humanity. It is a "deep time" project working for present and future generations.

Innovation

The innovation in GKP is based on new ideas, approaches and their applications in digital knowledge transfer (KT), such as:

New artificial neural network (ANN)-based hyperspace knowledge structure

“Active” content conveying knowledge and embedded KT metrics, and analytics

Real-time AI-assisted KT for personalized knowledge acquisition while closing all detected knowledge gaps, and many more.

New metadata systems for classifying and linking knowledge

Lean principles-based (no waste) digital KT process guaranteeing quality and efficiency

All that innovation is know-how of GKD Ltd.

The Roadmap

GKP is a long-term project. The platform development and implementation will be completed in four stages:

Stage 1 - GKP “Core” (knowledge hyperspace and KT sub-systems) design and development

Stage 2 - Integration of all GKP functional sub-systems (including cloud, e-commerce, and information cybersecurity)

Stage 3 - Further GKP automation involving personal AI-assistants and bridging the platform with other Industry 4.0 platforms

Stage 4 - Creating General Artificial Intelligence (GAI) based on accumulated human knowledge

The timeframe for completion of each phase is projected up to 24 months. The initial start of GKP global business operations in the knowledge market is projected after completion of Stage 2. The GKP IPO is projected at Stage 4.

The Market

GKP global business will change the way today's knowledge industry operates. The platform is projected to gradually accumulate considerable segments of the existing global knowledge markets, including publishing, education, workplace training, learning technology, etc. related. All of those together projected to reach \$10.5+ trillion in 2030.

Funding

The company is looking for early-stage funding by long-term strategic partners-investors (VCs or/and CVCs) to complete the GKP project and start together business operations in the global knowledge market.
